

# HDx35 Mark II

Datasheet

04/2013

Art.Nr. 193000000500

The HDx35 is an optical doubler that enables B4 mount 2/3" HD video lenses to work with most 35 mm format large sensor cameras. The Mark II system has increased coverage to work with more cameras,

The HDx35 Mark II adapts from B4 to a Universal Mount System. Available mount options include ARRI PL, Canon EF, Nikon F, Sony E and Micro Four Thirds.

All HDx Optical Adapters also optically correct for the different spectral alignments between three-chip prism block sensors, for which the B4-mount lenses were designed, and the single sensor of the large sensor cameras. HDx Optical Adapters are highly telecentric in design, delivering a bright, sharp image across the entire frame, with excellent color and contrast.

## Technical Data

Max. image input $\varnothing$ (mm)	11.8	Lens Mount	B4 2/3"
Max. sensor $\varnothing$ (mm)	30.2	Camera Mount	UMS PL
Magnification	2.6x	Diameter (mm)	65.0
Max. input F Number	1.8	Length (mm)	88.5
Light drop (stops)	2.5	Weight (kg)	0.5
